Forecast for Sunday 10 Jan 2021

Weather: Remaining cloudy overnight with a few drizzly outbreaks. Quite a dull start to the day with lots of low cloud and some outbreaks of drizzle or light rain, staying wintry at high level. Very little in the way of brightness and feeling very damp and cold. Cloud lifting a little later in the afternoon in the north.

Chance of cloud free mountain/hill tops above 800m: 10% widespread fog, mist and cloud and outbreaks of drizzle and sleet, perhaps more brightness around the fells in the north in the afternoon.

Visibility: Overcast low cloud with bases around 2-300m during the morning will make navigation on the fells quite tricky. Cloud bases lifting in the north to 5-600m but generally quite a claggy day. Visibility will become very poor in outbreaks of sleet and snow.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A dull and overcast winters day and it will feel very cold in the moderate westerly winds. Freezing level lifts to 1000m initiating a slight thaw of lower snow on the fells and a general softening of the snow.

Forecast for Monday 11 Jan 2021

Weather: Extensive cloud and frontal rain and sleet will push across the area from the northwest. Freezing level rises to above the summits so it will mainly be outbreaks of rain rather than snow, becoming drier later. Southwesterly gales will ease later in the day.

Maximum wind: Southwesterly winds 30-35mph gusts 40-45

Chance of cloud free mountain/hill tops above 800m: 20% lots of low cloud and frontal rain and sleet will make views very unlikely.

Visibility: Extensive low cloud with cloud base quite low perhaps around 3-500m, visibility also very poor in rain and sleet, careful navigation will be required.

Temperature: **Valleys:** Plus 6 Celsius.
At 800m: Plus 1 Celsius.
Freezing level: 1000 rising to 1400m.
